Hotpoint

The Hotpoint *vent hob*; our all-in-one solution to cooking and venting...

Inspired by home cooking, our vent hob features a built-in venting hood that automatically removes cooking vapours and odours, protecting your kitchen and keeping it smelling fresh.

The efficient induction hob combined with a hood in one appliance offers you the freedom to install your hob where you desire.

### Combi Duo

The Combi Duo zone allows you to combine two single cooking zones into one extra large cooking space.

### Keep Warm

If there's something else that needs doing before you can serve dinner, the Keep Warm function maintains the perfect serving temperature for your food.

### Safe activation

Induction technology will only start heating once it detects a pan, helping to prevent any mishaps in the kitchen and ensuring minimal energy use.

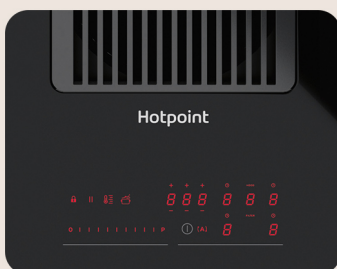

### Pause

The Pause function allows you to pause the cooking if you need to - so you can come back, press one button, and pick up where you left off.

### A Energy Class

Induction hobs are the most efficient choice of hob for your home. They can boil water quicker than a kettle, so you can keep your energy usage down and costs at bay.

### Touch control

Hotpoint's touch control hobs are easy to use with just your fingertips.

Our vent hobs come with a recirculation venting kit, perfect for installing in a kitchen island.  
Take a look at the installation video [here](#).
